

Turn every SOW promise into proof a client can approve.

AI-assisted acceptance evidence for web agencies.

BLUEPRINT HACKATHON

One SOW.
Six criteria.
One proof
chain.

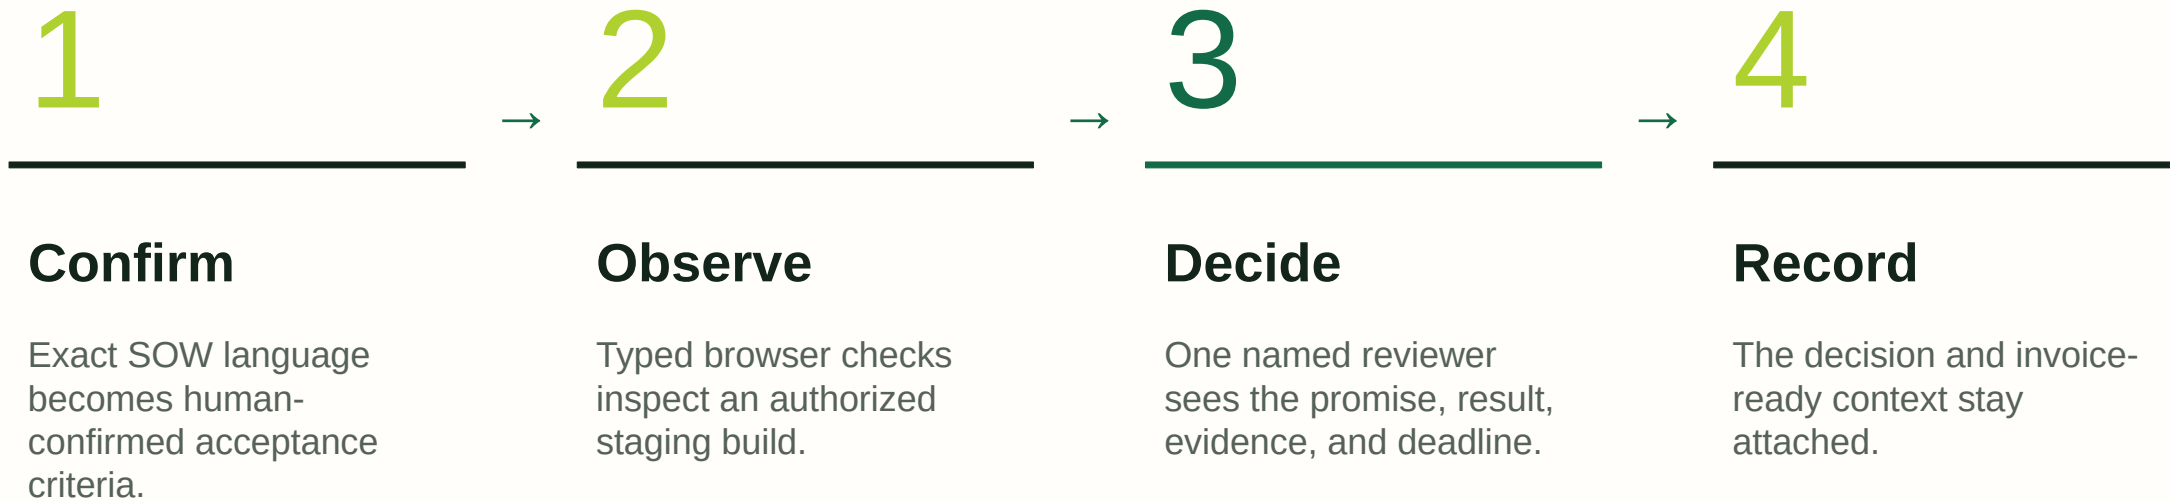

Built during Blueprint 2026

The work is done. The decision is still scattered.

- | | | |
|----|-----------------|---|
| 01 | Scope | The promise lives in a SOW. |
| 02 | Proof | Screenshots and observations live somewhere else. |
| 03 | Decision | Approval gets buried in email or chat. |
| 04 | Billing | The invoice handoff loses the evidence trail. |

Greenlit's job is to keep those four moments connected.

One evidence chain replaces the handoff gap.

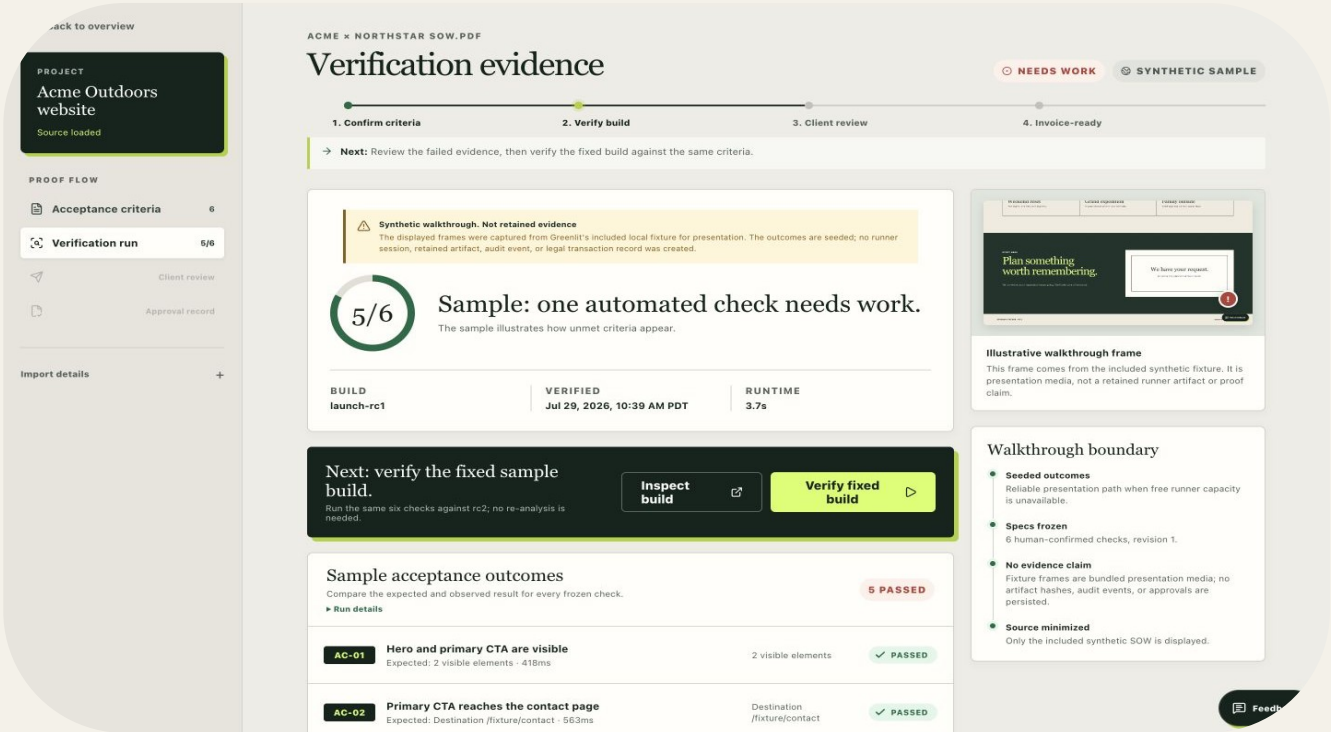

AI drafts. The agency confirms. The browser observes. The client decides.

A polished success message is not proof.

The synthetic release candidate looks successful, while the underlying request fails. Greenlit keeps the observed failure attached to the frozen promise.

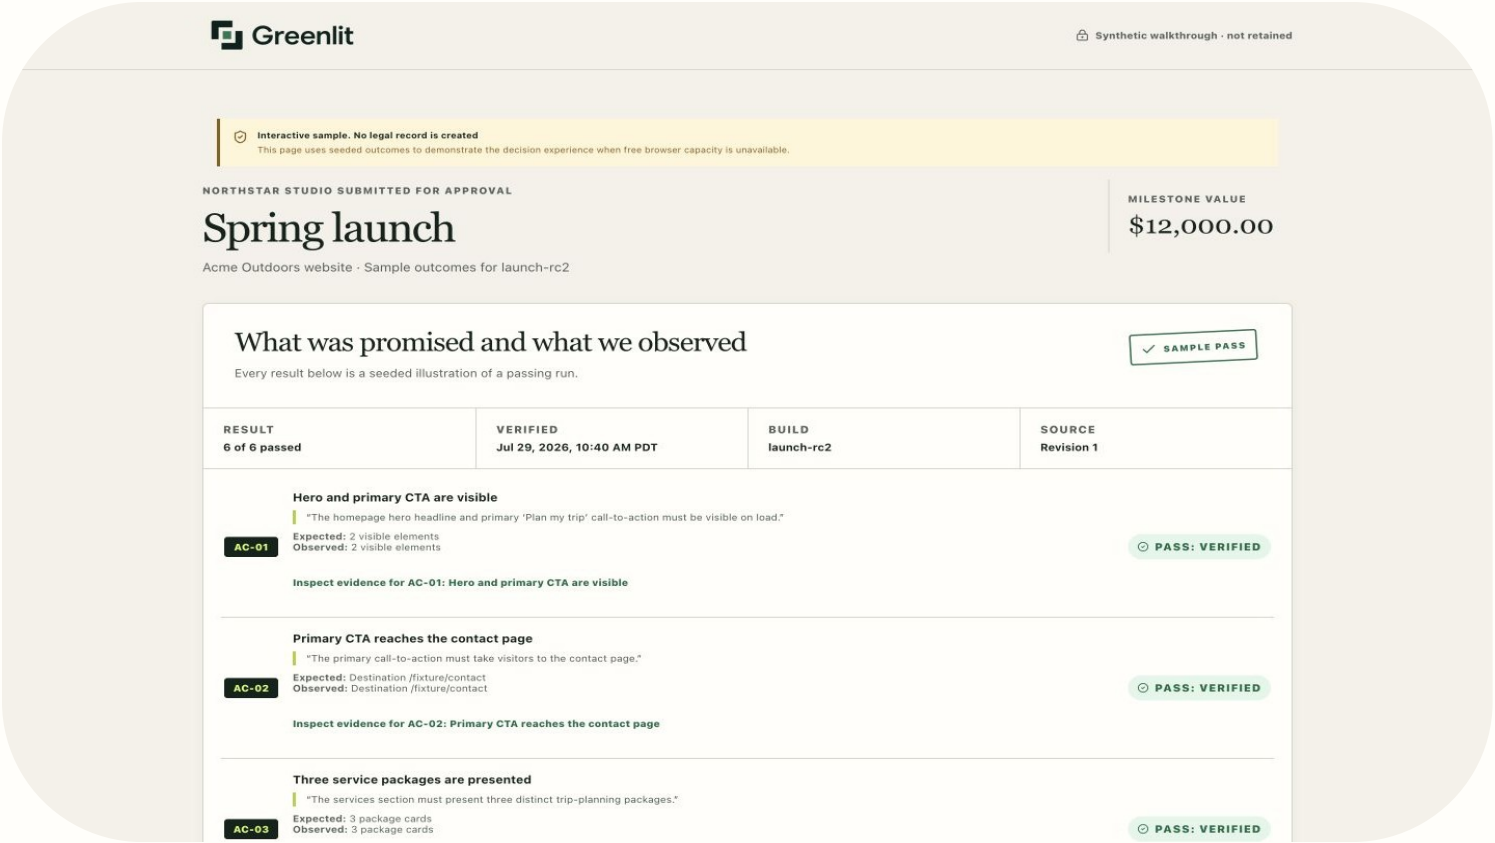

AC-04 · NEEDS WORK

Visible confirmation contradicted the HTTP 500 response.

Synthetic fixture · presentation evidence, not a retained runner artifact

The client sees the promise—not a test dashboard.

Exact source language

Expected and observed result

Evidence and deadline

Approve or request changes

The walkthrough ends in an invoice-ready sample.

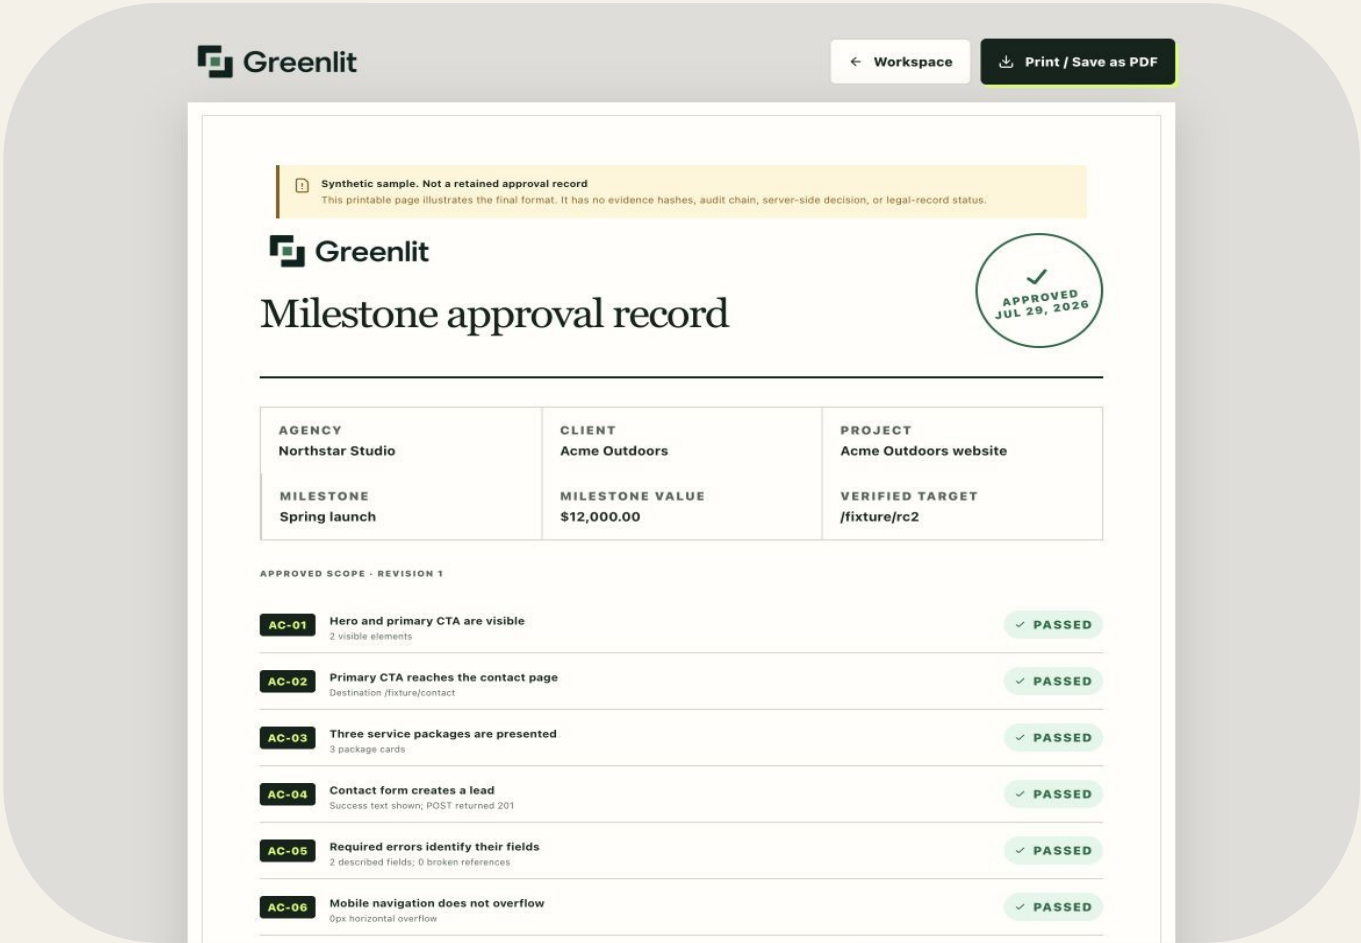

One printable sample connects the milestone value, revision 1, observed build, local-only decision, and approval format.

What it is

A printable sample of the approval and billing handoff.

What it is not

A signature product, certification, ledger, or payment guarantee.

AI drafts. Humans decide.

ARCHITECTURE

Next.js on Vercel
Gemini + Zod extraction
Cloudflare Queue + browser worker
Supabase storage + RLS

TRUST BOUNDARIES

Human-confirmed criteria
Typed, allowlisted checks
HMAC-signed jobs and callbacks
Private evidence with expiry

Stateless web tier · queued runners · frozen contracts keep the path scalable and repeatable

Built during the hackathon, tested end to end.

Build	Built during Blueprint 2026; a complete agency-to-client workflow.
Verify	Typecheck, lint, tests, build, migrations, and browser flow passed.
Explore	Live product, source code, architecture, and demo flow.
